

elite® range

A range of *quality* magnetic catches

This is our contemporary range of high quality magnetic catches designed for a high quality environment.

easy installation
all fixings hidden
silent closure

unique

The Elite® range of magnet catches does not rely on contact for closure and will continue to work over a gap, allowing for movement of frame and door.

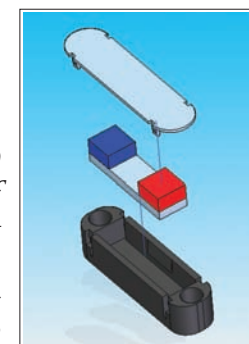

silent closure

Unlike conventional magnetic catches, there is no need for the catch to close directly onto a counter plate. Our unique design will tolerate a gap, which allows silent closure by the introduction of a buffer system between catch and steel, providing a **quiet but positive close.**

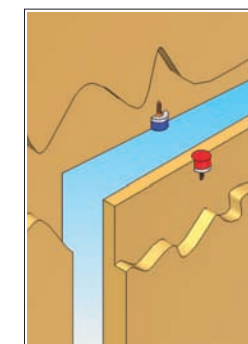

attractive

Smooth lines with no fixing holes visible. There are no unsightly protruding pole pieces to rattle and detract from the appearance of the furniture.
