

This new range of four Touch Latches has been introduced mainly in response to a demand from the cabinet furniture and hi-fi industries. They will hold a cabinet door closed, and only a light touch is needed to operate the internal spring in the catch to release the door. The elegant and simple body conceals an ingenious and efficient mechanism designed for durability and problem-free operation. The travel on the door for its release is a minimal 2mm allowing the cabinet door to lie flat on its frame.

TL 1

Side fixing.

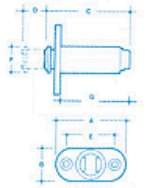

Colours: White, black
Counterplate: Z12, V4 (page 22), TLC1, TLC2
Fixing: Two No4 round headed screws in the oblong slots which allow final adjustment

TL 2

Side fixing holding two doors independently without a central pillar.

Colour: Black
Counterplate: 2 x Z12, V4 (page 22), TLC1, TLC2
Fixing: Three No4 roundhead screws in the oblong slot which allow for final adjustment

TL 3

Colour: Black
Counterplate: Z12, V4 (page 22), TLC1, TLC2
Fixing: The body is fitted into an accurately drilled 15mm hole and then fixed by two No4 countersunk head screws through the face flange
